

DocuWare is a proven enterprise content management system. Paired with the StapleWare[®] Connect to Microsoft Dynamics GP module, users can easily lookup and file documents from within Great Plains.

Tight Integration

Integration has never been easier! Create lookup integrations within Great Plains using shortcut keys or put links inside the Additional menu of any Great Plains window.

File Documents from GP

Store documents to DocuWare directly from the GP application, while capturing critical index information about the document. Users don't have to open DocuWare, simply use the integration buttons or shortcut keys embedded in Great Plains.

For example: The Accounting department enters invoices into Great Plains, and at the same time stores the invoices to DocuWare. When the product is received, the Receiving department enters the products as received in Great Plains, and simultaneously stores the packing slip to DocuWare. All documents are automatically indexed and filed correctly, and linked to Great Plains for future lookup.

Unlimited Integrations

Create an unlimited number of search or store integrations for your Great Plains installation.

Benefits

- No screen scraping
- One-click lookup and filing
- Integrate with any GP window
- Store from scanner, folder or tray
- DocuWare Cloud Compatible

Applications

- Accounts Payable
- Accounts Receivable
- Manufacturing
- Payroll
